Frankston and Barsanti were both retired from the NSA (National Security Agency) and spent many years working on classified space shuttle projects. They hired two programmers, one to develop software and one to do the graphics work. The graphics work was done at a computer graphics workstation that was at the same location as the developer's office. The software was written in BASIC, but the graphics were developed using a Graphics Development System (GDS) developed by Maxon for Epson. GDS was the same as PicoDraw, a software product developed by Herman Landman of Universal Scientific. In 1981, the two coders created the first version of AutoCAD for the GDS. They gave it a name, "PaperCAD," and later, while working for National Semiconductor, they named it "AutoCAD 1.0." At the time, this was the first CAD program released for personal computers. It was well received by

Use AutoCAD is the primary drawing application that most engineers, architects, technicians, draftsmen, designers and contractors use for drafting, design, drawing, rendering, creation of BIM models, and printing. Some of the areas where AutoCAD's functionality is most commonly used: Architectural engineering The structural and civil design of buildings, highways, bridges and other civil engineering projects. Land surveying Topographical surveys for planning, planning, zoning, conservation districts and land use planning. Heavy construction Engineering and construction design drawings for concrete, steel, and masonry bridges, dams, power stations and large civil engineering projects. Lighting design Designing and analyzing lighting, especially lighting for high-traffic areas such as roadways, parking lots, factories and other industrial areas. Site engineering Design of construction sites, landfills, land reclamation, industrial areas, underground basements and other industrial sites. Transportation Engineering Land and air transportation, tunnels, pipelines, ship and other transportation engineering. Architecture Architecture and interior design of buildings, their elevations and sections. Product engineering Product planning, product design and manufacturing. Interior design Interior design, layout, furniture, color scheme, decor, plants, fixtures and furnishings for indoor spaces. Geotechnical engineering Design of earth excavation, caissons, shafts, pipelines, and foundations. Network design Design of buildings, distribution networks, switches, load centers, splices and topology. Structural engineering Design of the structure of the building, its components (walls, columns, beams, roof, etc.), the building's plans and specifications. Run autocadkeygen.exe and select the engine. Select the version of Autodesk AutoCAD you are using. Press the ok button, and wait for the key to be generated. Then, the key will be automatically copied to the clipboard. You can install these keys on any computer with Autodesk AutoCAD 2008 or 2010, but I prefer to install them on my own computer. Install 3D Max (and Maya) To install the 3D Max and Maya licenses on an OEM PC that is not part of a domain you must run the "generic" installer. Launch the Setup.exe and follow the instructions for your system. For a list of the products and their installer files, visit Autodesk Multimedia Player The Autodesk Multimedia Player is required for viewing some of the animations produced by Autodesk Architectural Visualization applications, such as Fusion 360, Revit and Navisworks. The Autodesk Multimedia Player is free to download and is intended for use on PCs running Windows XP and later operating systems, and is compatible with all Autodesk Autocad and Autodesk AutoCAD 2009 through 2016 releases. Additionally, in 2010 Autodesk added an Autodesk Multimedia Player web player to the Autodesk website for use on computers running Windows XP and later operating systems. The web player is intended for use on computers running a web browser (such as Internet Explorer and Mozilla Firefox) that is capable of viewing the web pages that contain embedded media such as graphics, animations and video. The web player also supports playlists which allow a user to play multiple media files in sequence. While the Autodesk Multimedia Player and web player are not required for installing Autodesk products, both are useful for viewing content created with Autodesk Architectural Visualization applications. Building tools: Add Revit file links to the drawing: Import links to create links to external Revit models, so that you can create up to 50 linked models. (video: 3:27 min.) Create a hole and insert a Revit model: Select and create a hole in a wall or create an opening in a roof. Then, select a Revit model and place it into the hole. (video: 2:55 min.) Insert a row of panels at the right height: The grid and Measure toolbar let you control where you insert panels and other objects, and now you can control the height of each panel too. (video: 1:34 min.) Quickly move and reshape walls: The Surface geometry tools let you move and reshape walls in just a few clicks. To create a beveled wall, draw a wall, then select the Move tool and drag the wall a distance. To create a rounded wall, select the arc tool and drag it. (video: 4:48 min.) Create windows with an offset frame: The Offset tool lets you use a small, nearly invisible frame to create a window that's set off by a few inches. (video: 3:01 min.) Options in the drawing window: Easily access other views. Now, while you are in any view, you can right-click to access other views, where you can see the selected objects in a perspective or orthogonal view. (video: 3:32 min.)
