Emergence of spatially modulated wave patterns in optical media. We investigate the emergence of spatially modulated wave patterns in a birefringent photonic crystal with an all-angle incidence, such as solitary waves and solitons. We show that such spatially modulated wave patterns emerge not only when the incident light is confined within a planar cavity formed by a birefringent photonic crystal, but also when the light is incident from a bulk medium such as an isotropic medium, a biaxial crystal or a semi-infinite medium. The roles of the bulk parameters, such as the refractive index, the oblique incidence angle, and the spatial distribution of the photonic crystal, on the formation of the spatially mod
