While this guide may look like it was originally written for a Macintosh, it is also applicable for Windows 10. Creating Simple, Standard, and Custom Views For a basic tutorial on using the View command, see AutoCAD Crack Keygen Overview – View. For more in-depth information about using views and their properties, see Working with Views. Creating views in AutoCAD is similar to creating a new drawing in AutoCAD. You start a new drawing by creating a new page or layer. You then create one or more views by selecting a view type (active view) and giving it a name and description. You then use the View command to move the active view into a new drawing space. A view is a space in a drawing where you place objects, symbols, text, and annotations for later use. It is a blank, open space for placing objects and drawing in your drawing space. By default, the view points to the current page, layer, or sheet, as you will see below. You can also set a view to open a new page, a new layer, or a new sheet. Once you specify a view, you can add objects, symbols, text, and annotations to it. You can also move objects and symbols to a new location in the view, so you can return to the view and redraw objects in the drawing. You can also hide a view, close it, or resize it, which will hide or show the objects in the view. A page is a piece of paper or other media that is scanned, photographed, or input through a digital tablet to produce an electronic file. A page can be output as a PDF or EPS file. Pages can be printed as part of a report or drawn on using the Plot command. To create a new page or layer in AutoCAD, open the Home tab on the ribbon, click the Page icon, and follow the prompts to create a new page. A layer is a way of grouping objects. When you select an object and use the Move, Rotate, Scale, or Shear command, you move or rotate the object on a layer. Layers are typically used to group objects together, and then you can make edits to the group. Layers are available to be set on pages, and they can be closed or hidden when you have created enough layers to contain the drawing. You can set up some layers to always open on a page, regardless

In addition, AutoCAD supports some of the Autodesk software as a service (SaaS) products, including On Demand Engineering (ODE) and AutoCAD360. Automation A basic rule for automation of AutoCAD is to interact with it using an external automation application. AutoCAD can be controlled by a script using Application Programming Interfaces (APIs) and other programming languages. AutoCAD has a scripting language AutoLISP. AutoLISP scripts can be written directly in the AutoLISP editor or using Visual LISP or Visual Basic Script. The code of an AutoLISP script has to be saved in a file extension *.li. AutoCAD stores script file names in a .scr file extension. A scripting program, called a macro builder, runs a script file in AutoCAD. AutoCAD also can be controlled and run by an external script. This is done with a scripting language called Visual Basic for Applications (VBA) for AutoCAD. VBA scripts can be written directly in the VBA editor or using Visual Basic Script (VBS). The code of an AutoCAD VBA script has to be saved in a file extension *.bas. A scripting program, called an application builder, runs a script file in AutoCAD. AutoCAD also can be controlled and run by an external application. This is done with a scripting language called Visual LISP for AutoCAD (VLP4A). VLP4A scripts can be written directly in the VLP4A editor or using Visual LISP (VLS). The code of an AutoCAD VLP4A script has to be saved in a file extension *.vlt. Code generators AutoCAD provides a number of code generators. These include the DXF API, which converts a DXF file into an object-oriented class file, and the Xref and Thesaurus that generates cross-reference information. Document interchange AutoCAD supports a number of file formats. AutoCAD files can be opened and saved in the following file formats: AutoCAD Drawing: DXF, DXF+ (as in DWG), DWG, DWF (with filenames ending in.DWG or.DXF), dxf. AutoCAD Electrical: EPL, MEP, IES. AutoCAD LT: ca3bfb1094
