Below is a breakdown of the new features: New Player Behaviors on the Pitch Fifa 22 Full Crack now accurately reflects the complex and dynamic movements of football players. With 3,500 animations, new features, new interactions, and the most real-world, authentic performance capture technology, players can once again perform like athletes, not actors, in gameplay. Pitch Awareness System Dynamic Pitch Awareness will encourage defenders to step up their awareness of offside situations. This all-new system will adjust defenders' offside triggers based on whether they're covering their own or opponent's offside line and place them strategically, ensuring the pitch is covered in the most efficient, effective way. Defenders can be seen straddling their own or opponent's offside line, positioning themselves so as to maximize cover coverage. As the ball is played, the defenders will be able to more easily predict which way the ball will be passed, which will affect the readjustment of their position. On-ball and Goalkeepers Behaviors Become aware of opposing players' offside behaviour with new On-Ball Proximity detection. With new Near-Ball Proximity Detection system, attacking players' offside triggers are reactivated at a quicker pace than in the previous FIFA. If a defender remains in proximity to the ball for longer than the set threshold, the Offside Proximity trigger will be forced to update, triggering defenders to step up their awareness of on-ball situations. At the same time, the new On-Ball Proximity detection reacts faster than in previous versions of the FIFA by triggering Offside Proximity triggers even if the defender is approaching the ball, but has not yet touched it. This ensures the Proximity triggers react instantly, updating quickly when the attacker has offside position and is nearing the ball. The goalkeeper's new offside triggers will also respond more quickly than before. They'll react to both Near-Ball Proximity and Offside Proximity triggers to keep them updated and in position. The goalkeeper can also use both Near-Ball Proximity and Offside Proximity triggers to help them anticipate an offside play. Defender Offside Behavior Defenders now use a new dual-trigger system to respond to offside events. Each trigger reacts to the ball being played before the

I need to deserialize an object that have 2 nested arrays. I've tried with this code: Gson gson = new GsonBuilder().create(); Weather[] w_s = new Weather[4]; Weather[] w_a = new Weather[4]; w_s[0] = new Weather(1, "s", "Sun"); w_s[1] = new Weather(2, "s", "Sat"); w_s[2] = new Weather(3, "s", "Mon"); w_s[3] = new Weather(4, "s", "Tues"); w_a[0] = new Weather(1, "a", "Sun"); w_a[1] = new Weather(2, "a", "Sat"); w_a[2] = new Weather(3, "a", "Mon"); w_a[3] = new Weather(4, "a", "Tues"); Weather w = gson.fromJson(blob, Weather[].class); But this isn't working because the object Weather is not Serializable. Is there a way to deserialize in this way using Gson? A: I believe you'll want to use a TypeToken to do that. In this case, the first parameter to fromJson() would be the type of object that would be returned. So it would be Weather[].class To be more specific, you'll need to use this instead of the first parameter, Type type = new TypeToken<>().getType();
