Steps 1 Purchase a copy of Photoshop for \$68.99 for Macs, or \$72.99 for PCs. You can download it at the Adobe site. 2 Open Photoshop and click Start, then click New. 3 In the Create New Photo dialog, choose the type of file you want to create: • For color photos: Choose a file format that will be compatible with today's color printers, such as JPEG or TIFF. • For black-and-white photos: Choose RAW or Photoshop Document. RAW is a large file that preserves the data you enter, while Photoshop Document contains information for editing images. 4 Select a dialog box and click OK to accept the default settings for the file type you chose. 5 Enter any name for the photo in the Name text box. Click OK. 6 In the Open dialog, navigate to the folder where you want to save the file and click Open. 7 Click the arrow next to the name of the open photo and then click OK. 8 To move the photo to a different location in the folder, drag the image to the new location. To delete the photo, choose Edit→Select All→Delete (Shift-Delete). 9 Click an area of the photo that doesn't have anything on it. That's the blank space in a grayscale photo in which you can apply the various adjustments in Photoshop. 10 Click the Adjustments button. The Adjustments panel opens with the Basic panel and the Tools panel, in which you can make most of the usual adjustments to an image. 11 Click the Basic panel and move the Curves tool up or down until you like the picture. The Curves tool can adjust the contrast of the picture. 12 For extra control, click a button or box on the left side of the panel to make the adjustment you want. For example, under Clarity, drag the sliders until you're satisfied. 13 Click OK. 14 Click the Tools panel. Drag the tools on the panel to see the effects they have on the image. You can add or subtract contrast or saturation, improve the details in a photo, or apply special effects. 15 Click Undo until you are satisfied with the results. 16

The Kansas City Chiefs will host the Detroit Lions for the first time since the franchise left Detroit in 1995. The two teams haven't played since a 12-9 Chiefs win in Detroit during Week 10 of the 1994 season, when the Lions had Barry Sanders as their star running back, while the Chiefs were led by quarterback Elvis Grbac. Here's a guide to what to expect on Thanksgiving Day as the two teams square off in Kansas City. How do the Lions look? The Lions were 2-0 in the two-game stretch after Thanksgiving Day last season. Travis Swanson/Getty Images Matt Stafford threw for 297 yards, two touchdowns and zero interceptions in a Week 9 win over the Texans. In Week 10, he threw for 319 yards with another two TDs and zero interceptions against the Bears. Mitch Trubisky threw for 198 yards, three touchdowns and one interception against the Bears. The Lions average 29.6 points per game. Matthew Stafford has 20 touchdowns and 12 interceptions. They also have the seventh-most passing yards (2,802) in the league. How do the Chiefs look? The Chiefs are coming off a loss to the Ravens. Dustin Bradford/Getty Images Chiefs quarterback Alex Smith threw for only 76 yards with one TD and one interception against Baltimore. The Chiefs average 32.9 points per game. Patrick Mahomes has thrown for 951 yards with eight TDs and two interceptions. The Chiefs are second in the league in passing yards (2,905) and have a 146.7 passer rating. How much should we expect to see of KC's on Monday? While the Kansas City defense has been stellar through eight games, it hasn't been quite good enough to make NFL defenses pay in recent games. The Chiefs have won seven of their last eight games, including a Week 1 victory over the Jaguars. I expect the Chiefs defense to show up. They have already given up nine passing TDs (second in the league) and are allowing 120.3 passing yards per game. The Chiefs have a chance to be the best team in the AFC West. They have two games (Kansas City, at San Francisco) in which they have a 1.5-game lead in the division, so they'll be content to rest starters a bit for one of those games. How do the Lions look at running back? The

Monosomy 7 at AML diagnosis identifies AML with myelodysplasia-associated genetic changes with poor outcome. The prognostic significance of complete cytogenetic response (CCyR) at the time of diagnosis in adults with acute myeloid leukemia (AML) is still a matter of debate. Considering the high frequency of monosomy 7, the link with myelodysplasia-associated genetic changes (MA-MDS), and the association of 7q defects with poor outcome, we conducted a comprehensive study of AML patients who achieved CCyR after induction therapy. Consecutive patients with AML who achieved CCyR were analyzed for the presence of seven known recurrent genetic alterations and for MA-MDS. The results were compared with AML cases that failed to achieve CCyR at the time of diagnosis. Five hundred and sixty-six patients with AML were treated; among them, 60 (10.5%) achieved CCyR. The median follow-up from the time of CCyR was 36 months. Monosomy 7 at the time of diagnosis was detected in 7 of 60 CCyR and in 9 of 40 (20.9%) non-CCyR patients (P 60 years were the only independent adverse prognostic factors in terms of achieving CCyR. Monosomy 7 at the time of AML diagnosis identifies a patient subset with MDS and poor prognosis.Q: The determinant of an  $n \times n$  matrix is  $n^n$ ?
